## Current and Average Prices for Use in Farm Planning Ohio, 1974

### Introduction

Every farm manager makes many decisions that require consideration of future prices. Choosing between alternative plans for the use of available resources is an important managerial function. The primary purpose of planning or budgeting is to select the best course of action to achieve maximum future returns. Although we have little insight into the future, there are several tools and guides available to help us select our best alternative.

### The Planning Horizon

Two quite different horizons must be kept in mind when making farm plans. First is an organizational or long run horizon which is far enough in the future that resources such as machinery and buildings will be worn out and must be replaced to continue in production. Acquisition of long lived productive inputs is usually based on the assumption that they can be used efficiently until fully consumed or depreciated. This horizon may encompass 15 to 30 or more years.

A second shorter horizon is used for making current or operational decisions. This may be one production cycle which in the case of crops consists of a season.

### The Tool Box

Past prices provide one of the very useful tools in predicting future price relationships. Over periods of time prices tend to have a similar relationship one to another. Some of these relationships have been used as norms or standards, for instance, corn-hog price ratios.

Historical price movements (trends, cycles, and seasonal changes) provide the farm manager with another useful tool. Price trends reflect changes

that encompass several production cycles and show the effects of changes in the total economy. Cyclical movements such as the cattle cycle are related to the time required to expand or contract an enterprise.

Seasonal price changes are directly related to the production of a commodity during the year. Corn is usually at its lowest price during the harvest period and tends to increase as the season progresses, until the next crop is ready for harvest.

### Guides

Past prices and price relationship can be very helpful to a manager in testing and evaluating alternatives. However, it must be remembered that the agriculture sector is not a separate and distinct isolated segment of our national economy. Every manager should be aware of fluctuations and expected changes in the general economy. He must relate his business activity to developments occurring in the community, nation, and world.

The planning period under consideration is important when selecting commodity and input prices to use for planning purposes. Ideally we desire to use prices that will be realized as each part of the plan becomes operational. Current prices with cyclical adjustments may be a good estimate of next year's prices. For a longer planning period, an average of a period of years including both the high and low of one or several cycles may provide the best price estimate. In any event the set of prices selected should be sufficiently recent to reflect comparable technology and long enough to average out one cycle.

Generally, commodities produced on farms and commodities such as processed livestock feeds tend to rise and fall with the demand for farm products. However, items used in farm production such as fuel, machinery and utilities tend to change more slowly.

Summing Up

A farm manager must constantly estimate future prices of items he will need for production and of commodities he will produce for sale. No one set of prices is adequate to meet all of these needs. These tools and guides can be used to help select a desirable plan and accurately estimate anticipated future income. Adjustments must be made when selecting any set of prices for a particular farm program. Advantages of location, personal contacts, and operating conditions make each farm situation an individual consideration.

## Grain &amp; Hay Prices Received by Ohio Farmers for Selected Years

Item	20 Yr. Average	5 Yr. Average	1969	1970	1971	1972	1973
Grain \$/bu. <sup>1/</sup>							
Corn	\$1.27	\$1.36	\$1.14	\$1.27	\$1.28	\$1.17	\$1.94

Stock companies' rates usually run 10%-20% more than Mutual Co. rates; Assessment Companies', 10% to 20% less than Mutual's. Assessment Companies have unlimited liability provisions.

<u>Item</u>	<u>Cost Per Unit</u>
<u>Taxes</u>	<u>Per \$1,000 Assessed Valuation*</u>
Rural Hill Land Counties	\$31.00 - 41.00
Rural Flat Land Counties	34.75 - 46.25
Urbanized Counties	44.25 - 53.00

\* In accord with a Supreme Court ruling, all parcels of real property must be appraised at 35 percent of market value. The Ohio electorate amended the Constitution at the 1973 General Election providing for assessment of farm land in accord with its use value rather than market value. The operative legislation has been passed for implementation in 1975.

### Machinery and Equipment Prices

The price paid by farmers for machinery and equipment varies considerably. Many things enter into the determination of the price such as the aggressiveness of the dealer, the machines traded in, the total value of the machine being bargained for, the size of the deal (how many machines and how many dollars are involved), public relations, the possibility of future purchases by the farmer, the amount of servicing required, and your bargaining ability. Dealers may accept a general pricing policy such as their cost plus a set mark-up of 5 to 18 percent, others discount the manufacturers suggested retail price.

Quality of workmanship and materials and the options selected influence the price of machinery and equipment. An item considered standard equipment by one company may be considered optional by another. Thus, the basic machine price may vary considerably from one company to another.

Factors other than price should be carefully considered before purchasing machinery. Among these factors are: 1) The reliability of the company and how well do they stand behind their products. 2) The service policy and practice of the individual dealer. 3) How readily available are parts and services. 4) Will it really do the job you want it to do.

Prices quoted on the following pages were computed from the prices quoted for the machines equipped as the farmers most often purchased them. The prices quoted by six machinery companies as their "most usual" selling price were averaged to obtain the prices quoted on the following pages. The general range of prices would be approximately the average price plus or minus 5 percent.

## New Machinery and Equipment Prices, 1974

Tractors <sup>1/</sup>					
PTO-HP Range	Plow Size	Average PTO-HP		Average Price <sup>2/</sup>	
		Gasoline	Diesel	Gasoline	Diesel
35-45	2-3	39	40	\$4,762	\$ 5,248
45-60	3-4	54	54	5,952	6,476
60-75	4-5	65	64	7,689	8,351
75-95	5-6	89	93	9,404	10,371
95+	6-7	--	116	-----	13,286

1/ All tractors with 3 point hitch, live PTO, power steering, fenders, lights, and speed-hour meter. 2-3 plow utility tractor with rear hydraulic outlet, all others both front and rear outlets. 4-5 plow tractors and larger equipped with power brakes.

Corn Planters

100,000	54' x 48'	34,470	3,200	37,670	.376

Price is bin only, no site preparation. Aeration kit does include motor and fan, perforated trench cover and transition.

## Grain Drying

(Suggested retail prices. Distance, discounts, and bargaining power may alter these prices.)

### Hatch Dryers

5 point moisture ratings (20%-15%) under ideal conditions

<u>Wet Holding Capacity</u>	<u>24 Hour Capacity</u>	<u>Price</u>
72 Bu.	1,400 Bu.	\$ 3,020
118	2,800	5,200
152	4,300	6,600
228	6,900	8,300
304	9,400	12,200
380	11,400	16,800

To get 10 point moisture removal capacity, take 60% of 5 point rating capacity; 15 point capacity take 40% of 5 point rating.

### Batch in Bin Dryers

Bin Diameter	18'	24'	30'
Capacity Bu.	3,285	6,000	10,000
Drying Capacity/Day*	820	1,250	1,840
Costs:			
Bin	\$1,600	\$2,400	\$4,020
Hatches	32	56	80
Foundation	154	240	290
Perforated Floor	380	660	950
Ladders	40	50	50
Fan & Heater	870(7hp)	1,200(10hp)	2,562(20hp)
Unloading Augers	<u>620</u>	<u>810</u>	<u>890</u>
Total	\$3,696	\$5,416	\$8,842

Price does not include site preparation, concrete pad nor electric and gas hookups.

\*Capacity is based on 10 point moisture removal (25%-15%) in 20 hours with a constant temperature rise of 80°.

### Continuous Flow Dryers

Model M \$7,800

Capacity:	Dry from 30% to 15%	109 bu/hr.
	Dry from 25% to 15%	154 bu/hr.
	Dry from 20% to 15%	256 bu/hr.

## Silos and Silage Feeding Equipment

### Silos

#### Bunker (concrete floor with creosote wood sides)

200 ton ( 6' x 20' x 100')	\$3,500
300 ton ( 6' x 30' x 100')	4,400
500 ton ( 8' x 30' x 80')	5,000
1000 ton (10' x 40' x 100')	7,500

#### Tower, Concrete Stave

	Base Price	Foundation	Roof	Total
250 Ton 16' x 50'	\$4,225	\$320	\$ 545	\$ 5,090
315 Ton 18' x 50'	4,960	400	712	6,072
510 Ton 20' x 60'	6,801	480	839	8,120
640 Ton 22' x 60'	8,048	500	1,135	9,683
780 Ton 24' x 60'	8,799	580	1,347	10,726

#### Tower, Airtight, Silage or Haylage, includes bottom unloader

Capacity, 40-45% moisture

125 t. (20 x 30)	\$14,355
150 t. (20 x 40)	18,065
225 t. (20 x 50)	20,490
300 t. (20 x 60)	22,973
550 t. (25 x 80)	38,995

#### Tower, Airtight, Grain Storage

Capacity, 25% moisture

7000 bu. (20 x 30)	\$11,510
14000 bu. (20 x 60)	20,130

### Silo Unloaders

	12'	16'	20'
Unloader	\$1,245	\$1,320	\$1,486
Motor	303	303	368
Tripod	59	65	90
Wench	60	60	80
Cable	75	75	95
Total	\$1,742	\$1,823	\$2,118

# Feed Bunk Equipment
